

Renewable Energy Consulting Services

Why select Bridgevue for your renewable energy consulting needs?

Bridgevue Energy is an expert in competitively sourcing renewable energy solutions tailored to your specific business needs. Bridgevue has experience structuring renewable energy supply agreements including wind, solar, biomass, geothermal and fuel cells. Bridgevue understands how to structure electric supply contracts that include renewable energy quantities at price parity with conventional power supply. We also have experience and knowledge incorporating renewable energy supply into existing retail electric supply contracts. Our professionals have renewable energy expertise with a variety of client types including data centers, hospitals, education, real estate and industrial.

Our services include:

- Defining Client Renewable Energy Goals
- Assessing Optimal Renewable Resources
 - Onsite versus Offsite
 - Resource Type(s)
 - Quantities
 - Combinations (e.g. Wind/Solar)
- Conducting Competitive Selection Process
- Negotiating Renewable Power Purchase Agreements

Why should you consider renewable energy now?

Power prices in the ERCOT market are trading near all-time lows mainly due to depressed natural gas prices. There is a risk that power prices will

start to increase in the future. Even in this lower price environment, offsite solar and wind are on par with conventional power costs. However, the solar cost landscape changes at the end of 2016, losing beneficial federal tax credits known as investment tax credits. As such, if you're considering solar resources as a part of your renewable resource solution, it's advisable to finalize agreements before late 2015 to better guarantee your project will meet the deadline.

In addition to cost benefits, the other advantages of considering renewable energy now include the following:

- Reduced Carbon Footprint
- Enhanced Corporate Social Responsibility
- Long Term Hedge Against Higher Prices
- Elevated Corporate Image
